

Overview

The fund seeks to achieve attractive absolute and relative long-term returns with lower risk and lower volatility than the stock market, and with relatively low correlation to stock and bond market indexes.

- Combines skilled, risk averse managers
• Mix of strategies not commonly available
• Transparent and understandable
• Litman Gregory's 30+ years of intensive manager due diligence and tactical allocation expertise
• Highly competitive cost relative to category
• Daily pricing and liquidity in a mutual fund structure

Fund Sub-Advisors

DCI—Paul Harrison & Team Long-Short Credit | Target Allocation: 19%

Invests systematically, long and short, in high-yield (and to a lesser extent, investment-grade) credit through both cash bonds and CDS. Seeks to generate positive absolute returns with low volatility through security selection, with little to no correlation to equity, investment-grade, or high-yield bond indexes.

DoubleLine—Jeffrey Gundlach & Team Opportunistic Income | Target Allocation: 25%

Invests opportunistically in fixed income, primarily within the mortgage sector (an area of particular expertise); Seeks to add value through security selection, portfolio construction, and via tactical allocations to other fixed-income sectors when there are compelling opportunities; May use limited leverage.

FPA—Steven Romick & Team Contrarian Opportunity | Target Allocation: 18%

Invests opportunistically across the capital structure as well as (to a limited extent) in less-liquid assets such as limited partnerships, mortgage whole loans, etc. This strategy includes both long and short positions.

Loomis Sayles—Matt Eagan & Team Absolute Return | Target Allocation: 19%

Invests across multiple global fixed-income sectors, focusing on yield curve positioning, duration, credit, and currencies; Utilizes both top-down assessment and bottom-up security selection. The strategy may short or hedge various risks via derivatives.

Water Island Capital—John Orrico & Team Arbitrage and Event Driven | Target Allocation: 19%

Invests in merger arbitrage and event-driven "special situations" using both equity and credit securities. May hedge various risks using derivatives and may use limited leverage.

SEC 30-Day Yield¹ as of 9/30/2021: Institutional: 2.00% Investor: 1.75% | Unsubsidized SEC 30-Day Yield² as of 9/30/2021: Institutional: 1.72% Investor: 1.47%

1. The 30-day SEC Yield is computed under an SEC standardized formula based on net income earned over the past 30 days. It is a "subsidized" yield, which means it includes contractual expense reimbursements, and it would be lower without those reimbursements.

2. The unsubsidized 30-day SEC Yield is computed under an SEC standardized formula based on net income earned over the past 30 days. It excludes contractual expense reimbursements, resulting in a lower yield.

Trailing Twelve-Month (TTM) Distribution Yield³ as of 9/30/2021 (Institutional): 2.93%

Trailing Twelve-Month (TTM) Distribution Yield as of 9/30/2021 (Investor): 2.66%

3. TTM Yield is the yield an investor would have received if they had held the fund over the last 12 months assuming the most recent NAV. The 12-month yield is calculated by assuming any income distributions over the past 12 months and any capital gain distributions made over the past 12 months and dividing the sum by the most recent NAV. TTM yield is not a reflection of future results.

Expense Ratios

	MASFX	MASNX
Gross Expense Ratio	1.75%	1.99%
Net Expense Ratio	1.47%	1.71%
Adjust Expense Ratio	1.33%	1.57%

The Net Expense Ratio reflects a contractual fee waiver and/or expense reimbursement, which is in place through 4/30/2022.

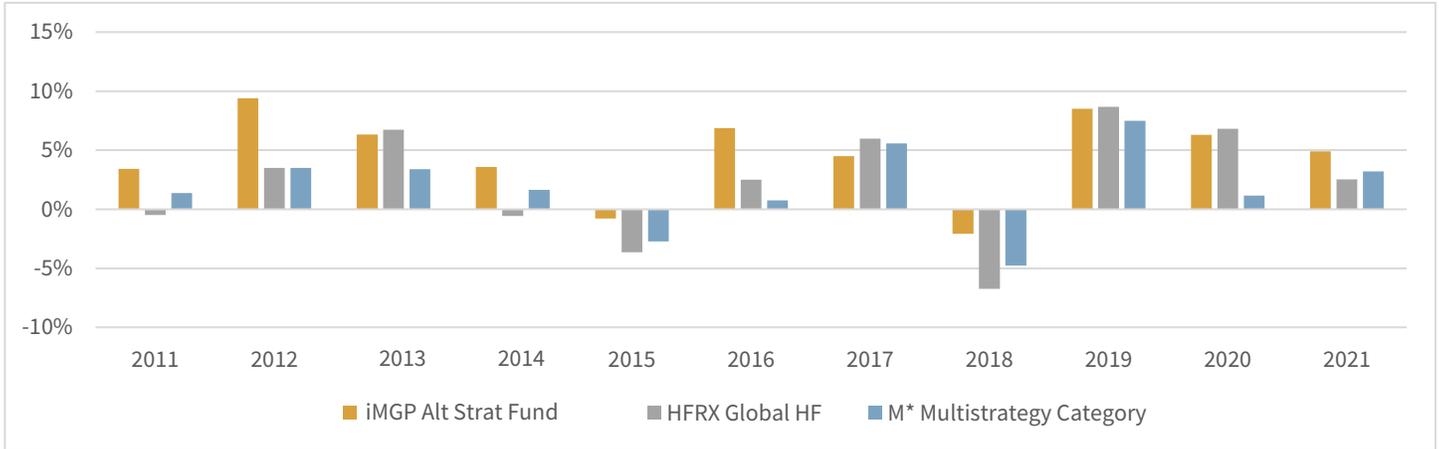

The Adjusted Expense Ratio is the same as the Net Expense Ratio exclusive of certain investment expenses, such as interest expense from borrowings and repurchase agreements, dividend expense from investments on short sales, and acquired fund fees and expenses.

See the Fund's prospectus for more information.

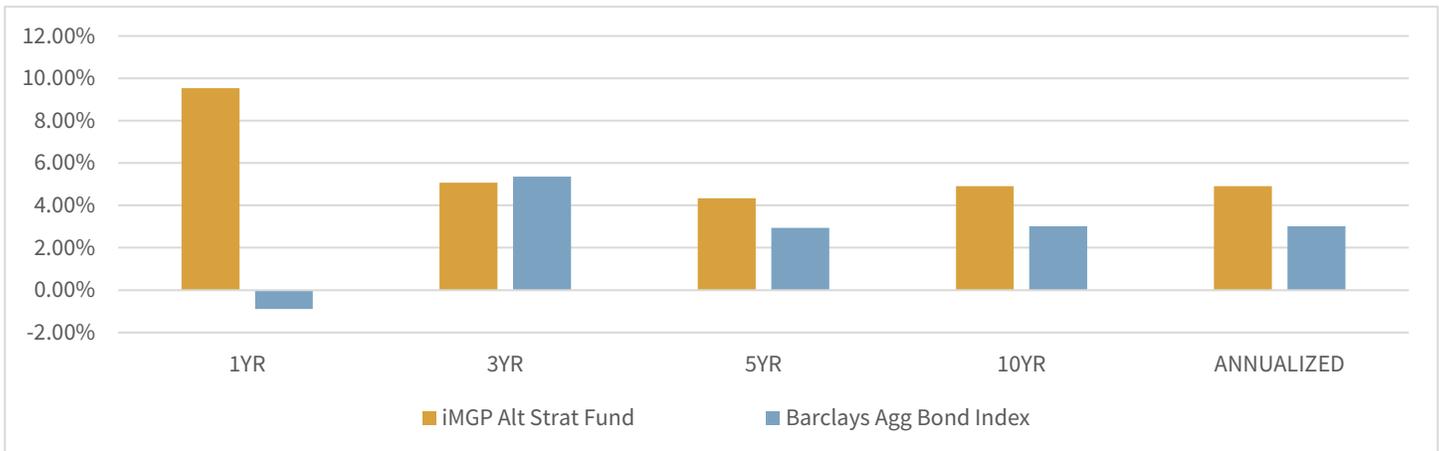

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. To obtain the performance of the funds as of the most recently completed calendar month, please visit www.mastersfunds.com. Investment performance reflects fee waivers in effect. In the absence of such waivers, total return would be reduced. The gross and net expense ratios can be found in the most recent Summary Prospectus (4/30/2021).

Must be preceded or accompanied by a prospectus. Read it carefully before investing.

Although the managers actively manage risk to reduce portfolio volatility, there is no guarantee that the fund will always maintain its targeted risk level, especially over shorter time periods and loss of principal is possible. The performance goals are not guaranteed, are subject to change, and should not be considered a predictor of investment return. All investments involve the risk of loss and no measure of performance is guaranteed. The fund aims to deliver its return over a full market cycle, which is likely to include periods of both up and down markets.

Though not an international fund, the fund may invest in foreign securities. Investing in foreign securities exposes investors to economic, political and market risks, and fluctuations in foreign currencies. Investments in debt securities typically decrease when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in mortgage-backed securities include additional risks that investor should be aware of including credit risk, prepayment risk, possible illiquidity, and default, as well as increased susceptibility to adverse economic developments. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Multi-investment management styles may lead to higher transaction expenses compared to single investment management styles. Outcomes depend on the skill of the sub-advisors and advisor and the allocation of assets amongst them.

Investing in derivatives could lose more than the amount invested. The fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. Merger arbitrage investments risk loss if a proposed reorganization in which the fund invests is renegotiated or terminated.

Diversification does not assure a profit nor protect against loss in a declining market.

Leverage may cause the effect of an increase or decrease in the value of the portfolio securities to be magnified and the fund to be more volatile than if leverage was not used.

Duration is a commonly used measure of the potential volatility of the price of a debt security, or the aggregate market value of a portfolio of debt securities, prior to maturity. Securities with a longer duration generally have more volatile prices than securities of comparable quality with a shorter duration.

i - The Morningstar Rating for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed products monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10 year overall rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. iMGP Alternative Strategies Fund was rated against the following numbers of Multistrategy funds over the following time periods as of 9/30/2021: 127 funds in the last three years, 101 funds in the last five years, and 35 funds in the last 10 years. With respect to these Multistrategy funds, iMGP Alternative Strategies (MASFX) received a Morningstar Rating of 4 stars, 4 stars, and 5 stars for the three-, five-, and ten-year periods, respectively. Ratings for other share classes may be different. Morningstar rating is for the Institutional share class only; other classes may have different performance characteristics. The Investor share class received a rating of 4 stars, 4 stars, and 5 stars for the three-, five-, and ten-year periods, respectively.

Market capitalization (or market cap) is the total value of the issued shares of a publicly traded company; it is equal to the share price times the number of shares outstanding. LIBOR stands for London Interbank Offered Rate. It's an index that is used to set the cost of various variable-rate loans.

Standard deviation is a statistical measure of the historical volatility of a mutual fund or portfolio, usually computed using 36 monthly returns.

Sharpe ratio is the measure of a fund's return relative to its risk. The Sharpe ratio uses standard deviation to measure a fund's risk-adjusted returns. The higher a fund's Sharpe ratio, the better a fund's returns have been relative to the risk it has taken on. Because it uses standard deviation, the Sharpe ratio can be used to compare risk-adjusted returns across all fund categories. The Fund's Sharpe ratio ranked 1 out of 47 in its Peer Group, US OE Multistrategy Morningstar Category from 10/1/2011 to 9/30/2021. Past performance is no guarantee of future results.

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Correlation is a statistical measure of how two securities move in relation to each other.

Upside/downside capture is a statistical measure that shows whether a given fund has outperformed--gained more or lost less than--a broad market benchmark during periods of market strength and weakness, and if so, by how much.

The Barclays Aggregate Bond Index is a market capitalization-weighted index, meaning the securities in the index are weighted according to the market size of each bond type. Most U.S. traded investment grade bonds are represented. The index includes US Treasury Securities (non TIPS), Government agency bonds, Mortgage backed bonds, Corporate bonds, and a small amount of foreign bonds traded in U.S.

The Russell 1000 Index measures the performance of the large-cap segment of the U.S. equity universe. It includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000 represents approximately 92% of the U.S. market.

The HFRX Global Hedge Fund Index is designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies; including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage, and relative value arbitrage.

Dividends, if any, of net investment income are declared and paid quarterly. The Fund intends to distribute capital gains, if any, to shareholders on a quarterly basis. There is no assurance that the funds will be able to maintain a certain level of distributions. Dividend yield is the weighted average dividend yield of the securities in the portfolio (including cash). The number is not intended to demonstrate income earned or distributions made by the Fund.

You cannot invest directly in an index.

Each Morningstar Category Average represents a universe of Funds with similar investment objectives. As of June 30, 2021, the Morningstar Multistrategy Category average expenses were 2.66% gross and 1.86% net.

Fund holdings and/or sector allocations are subject to change at any time and are not recommendations to buy or sell any security.
